

Happy New Year!

New Internet Price in 2026!

Fiber Fast Internet customers will see another price DECREASE! This is our SIXTH drop in just seven years!

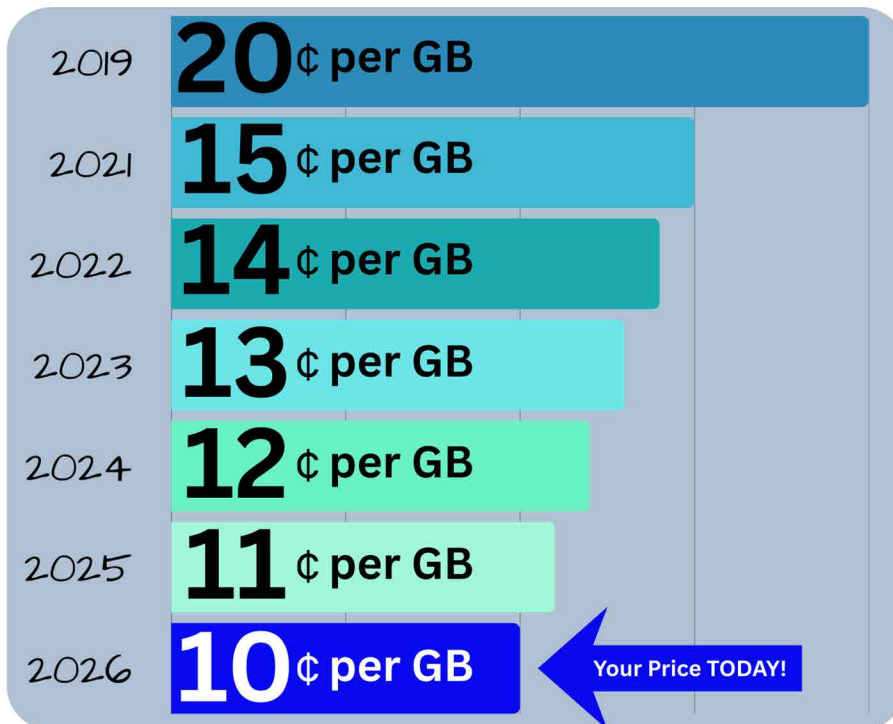

When we launched Fiber Fast Internet back in 2019 and switched to usage-based billing, we said it wasn't a strategy for the company to make more money. And here we are in 2026, proving it once again.

Your internet usage continues to rise as households stream, game, work, learn, and connect more than ever. Because our entire customer base is using more data overall, we're able to bring the per-gigabyte (GB) price down yet again.

Your new rate is just 10 cents per GB!

You'll see the new \$.10 per GB rate on next month's bill, which reflects your usage from December 17th, 2025 – January 16th, 2026.

That means you're already enjoying lower-cost internet **right now**.

From 20¢ per GB in 2019 to just 10¢ per GB in 2026, Fiber Fast Internet continues to be one of the few services that keeps getting more affordable while delivering the fiber fast speeds you've come to expect and enjoy.

Now, for just 10¢ you can download 250 songs, check 500 emails, game for 12 hours, video conference for 5 hours and stream in 1080 HD for 20 minutes!*

**Please keep in mind that these are only estimates and actual usage could vary.*

Happy New Year and Happy Surfing!

The Truth About "Fully Loaded" Streaming Devices

What You Need to Know

It may seem harmless. All you want is one device that gives you access to every streaming service with a single subscription. Unfortunately, that device does not exist... at least not legally.

Devices advertised as **fully loaded**, **jailbroken**, or **plug-and-play** are typically modified to access unauthorized or pirated content. Using these devices is illegal and is similar to stealing cable or watching pirated movies. If a device allows you to watch movies that are still in theaters or content you would normally need to pay for separately, it is not legal.

Can you get caught?

Yes. Copyright owners monitor the illegal distribution of their content and may file complaints under the *Digital Millennium Copyright Act (DMCA)*. These notices are sent to internet service providers, who are legally required to notify customers and take action under their Acceptable Use Policy.

Repeated violations can lead to warnings, service suspension, or termination. Civil penalties can be significant, with higher penalties applying to those who distribute illegal streaming services.

**ILLEGAL
STREAMING**

Additional Risks of Illegal Streaming Devices

Security:

Many uncertified or modified streaming devices do not receive regular security updates. This makes them vulnerable to malware, spyware, and botnets, which can hijack your device and use your home network and data without your knowledge.

Privacy:

Because these devices often run unauthorized software, your personal information may be exposed. Login credentials, viewing habits, and financial data entered on the device can be collected or misused.

Account Loss:

Using illegal streaming devices can violate the 'terms of service' agreement with legitimate streaming platforms. This may result in account suspensions or permanent bans, even for services you pay for legally.

Will these devices slow your internet speed?

Often, yes. Many illegal streaming apps rely on unstable or overcrowded servers, which can result in buffering, poor video quality, and interrupted service, especially during peak viewing times.

Bottom line: When it comes to streaming, deals that seem too good to be true probably are.

NNTC exists to provide reliable & efficient Broadband services for our customers.
